

Quality and Environmental Policy of TALLERES RATERA S.A.

TALLERES RATERA is a company founded in 1942 that has carried out significant research and technological development in the field of braiding machine manufacturing and auxiliary machinery throughout its history. Thanks to this effort, we are a leading company in the sector worldwide, exporting our machinery to more than 120 countries.

Aware that any commercial and industrial activity has an environmental impact due to energy consumption and waste generation, and taking quality as our main guiding principle, the company's management considers the implementation of the following points essential, which constitute the foundation of our quality and environmental policy:

- To comply with all legal and regulatory requirements applicable to our activity, as well as all voluntary commitments undertaken, both in terms of quality and the environment.
- To satisfy the needs of our stakeholders, meeting their requirements and expectations.
- To continuously improve our management system by setting feasible objectives and targets, and carrying out periodic monitoring to ensure compliance and suitability.
- To ensure proper environmental management based on the responsible use of natural resources, control and management of generated waste, promoting reuse and recycling, preventing pollution through environmental monitoring, and fostering respect for the natural environment, always considering environmental and occupational health protection criteria in decision-making.

Through the implementation of these actions, TALLERES RATERA is committed to the continuous improvement of the effectiveness of its Integrated Management System, based on the UNE-EN ISO 9001 and UNE-EN ISO 14001 standards, promoting sustainable and environmentally respectful development.

Our results will benefit our clients, our supplier companies, our personnel, and society as a whole.

April 2021
